From blank pages to streaks and smudges, printing problems can disrupt productivity and lead to wasted time and resources. In this blog, [123 Com Setup](#) will explore some common HP Envy printer printing problems and provide step-by-step troubleshooting solutions to get your printer back to its optimal performance.

1. Blank Pages or No Printing

One of the most common printing issues is getting blank pages instead of the expected printouts. If your HP Envy printer is not printing anything, follow these steps:

Solution:

- Check the ink or toner levels: Ensure that the ink cartridges have enough ink or toner to complete the print job.
- Print a test page: Use the printer's control panel to print a test page and verify if the issue persists.
- Clean the printhead: The printhead may be clogged with dried ink. Consult your printer's manual on how to clean the printhead.
- Reinstall or update drivers: Outdated or corrupted printer drivers can cause printing problems. Reinstall or update the drivers from the official HP website.

2. Streaks or Lines on Prints

If your prints have streaks, lines, or other imperfections, the following steps may help you fix the problem:

Solution:

- Run the printer's cleaning cycle: Many HP Envy printers have a built-in cleaning function to clear blockages in the printhead.
- Check for paper jams: A small piece of torn paper or debris inside the printer can cause streaks. Carefully remove any obstructions.
- Replace or align the printhead: If cleaning doesn't resolve the issue, consider replacing or realigning the printhead.
